

INSTALLATION INSTRUCTIONS

For best results please view our installation videos at www.berlingear.com

1. Clean your device screen with micro-fiber cloth provided.

2. Peel back two inches of "Tab 1" protective layer to expose adhesive side of the screen protector.

3. Line up the top edge to your device and apply the adhesive side to the screen.

4. Slowly roll the screen protector down while peeling back the remainder of the protective layer on the device screen. Discard "Tab 1" protective layer after removing.

5. Eliminate any bubbles using the smoothing card provided. For best results start from the center and push bubbles out toward the edges.

6. Remove and discard "Tab 2" protective layer from screen protector then polish once more with the micro-fiber cleaning cloth.

7. If needed, cut the dust eliminator tape into two pieces. Use one piece to lift the screen protector up and the other to remove any dust particles from the screen or the adhesive side of the screen protector.
